SERVICES — CONCEPT TO OPENING NIGHT

Commissions

We take on a small number of commissions at a time and build them end-to-end. If it needs to exist and doesn't yet, that's our department.

- **A** **Interactive Installation** — sensors, screens, projection, sound, custom software, built to survive an exhibition run.
- **B** **Exhibition Design** — layout, wayfinding, lighting logic, and the interactive layer that ties a room together.
- **C** **Generative & Real-time Visuals** — particle systems, simulations, data-driven scenes at 60fps.
- **D** **Creative Technology Consulting** — feasibility studies, prototyping sprints, honest answers about what can be built.

01 — INQUIRY
The occasion, space, timeline, budget. A paragraph is enough.

02 — SCOPING
A call, then a concept + feasibility doc with a fixed quote.

03 — BUILD
Prototype first, always. You see it running early and often.

04 — INSTALL
On-site install, calibration, documentation. We stay through opening night.

SIGNAL — WE ANSWER

ACRUX INTERMEDIA

A studio for works that fall between media.

We build strange, functional artifacts — deities you can summon, bureaucracies run by machines, rooms that whisper — and navigate by them.
